Foreword

EUROSTAT, the statistical office of the European Union, and the Statistics Division of the African Union Commission (AUSTAT) are proud to present the sixth edition of this yearbook, which offers a broad comparative view of the European Union and the African Union, and their respective member countries, in figures.

The publication is a result of the fruitful cooperation over the years between the European Commission (EC) and the African Union Commission (AUC) on statistical topics.

EUROSTAT, at the centre of the European Statistical System, and the Statistics Division of the AUC, engage to share good practices and lessons learnt from their experiences in producing statistics for different domains at regional level. In January 2016, they jointly launched the Pan African Statistics (PAS) programme which aims to support African integration by improving the availability and quality of statistical information required for informed decision-making and policy monitoring, and to support the African Union in establishing work programmes for statistics in Africa and in preparing evidence based strategy/policy papers for reporting and advocacy purposes. To this end the African Union strives to enhance harmonisation and coordination of statistics on the continent and to foster the coordination of main actors involved in this process. Among these are, at continental level, the African Centre for Statistics (ACS) of the United Nations Economic Commission for Africa (UNECA) and the Statistics Department of the African Development Bank (AfDB) and the Regional Economic Communities (REC) at sub-continental level.

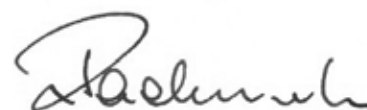

The present publication, which is largely based on the African Statistical Yearbook 2016 and the matching EU-28 data, is an example of a joint initiative between the statistical offices of the European Union and of the African Union.

We wish to thank all those who have contributed to the development of this joint publication. We remain convinced that having reliable, comparable, accurate and accessible data/information will make a major contribution to improve the partnership and the dialogue between the two Institutions, and the countries they represent as well as the statistics users and decision makers.

Dr. Anthony Mothae Maruping

Acknowledgments

This publication would not be possible without the considerable contribution of the United Nations Economic Commission for Africa and the African Development Bank into the preparation of the African Statistical Yearbook 2016.

We are also grateful to African National Data Correspondents (NDC) who provided useful data for their respective countries for the production of the African Statistics Yearbook.

INTRODUCTION

Africa-EU Strategic Partnership

Africa's continental integration is a key priority for the strategic partnership between the African Union and the European Union. The new Pan-African Programme will provide a major contribution to the Africa-EU Partnership, established by the two continents in 2007 with the Joint Africa-EU Strategy (JAES), in order to put their relations on a new footing. The programme is a key instrument for the European Union to implement, in close cooperation with African partners, the political priorities of the Joint roadmap 2014-17, which was adopted by African and European Union Heads of State and Government during the 4th EU-Africa summit in April 2014.

The eighth College to College (C2C) meeting took place between the African Union Commission and the European Commission on 7 April 2016 in Addis Ababa and reaffirmed the aims of the Joint Africa-EU Strategy and of its five priority areas of the Joint Roadmap:

1. Peace and Security
2. Democracy, Good Governance and Human Rights
3. Human development
4. Sustainable and inclusive development and growth and continental integration
5. Global and emerging issues

Support for statistical capacity building is essential to underpin all strategic objectives. Africa's Agenda 2063 gives a long-term vision for Africa over the next fifty years. Globally, the Agenda 2030 represents a global commitment to work together towards the achievement of the Sustainable Development Goals.

The Pan-African Statistics (PAS) programme, as part of the overall Pan-African Programme, aims to support African integration by improving the availability and quality of statistical information required for informed decision-making and policy monitoring. To this end it will provide technical assistance to enhance harmonisation and coordination of statistics on the continent and to foster institutional capacity building. It also supports preparations towards a statistical institute at African Union level, the creation of which was decided by the African Heads of States and Governments in January 2013.

The Partners

The African Union is a continental organisation founded in 2001 and its main objectives were to rid the continent of the remaining vestiges of colonisation and apartheid; to promote unity and solidarity among African States; to coordinate and intensify cooperation for development; to safeguard the

sovereignty and territorial integrity of Member States and to promote international cooperation within the framework of the United Nations.

The vision of the African Union is that of "an integrated, prosperous and peaceful Africa, driven by its own citizens and representing a dynamic force in global arena."

The African Union Commission is the key organ playing a central role in the day-to-day management of the African Union. Among others, it represents the Union and defends its interests; elaborates draft common positions of the African Union; prepares strategic plans and studies for the consideration of the Executive Council; elaborates, promotes, coordinates and harmonizes the programmes and policies of the African Union; ensures the mainstreaming of gender in all programmes and activities of the African Union, and, last but not least, for statistics for Africa as a continent.

The mission of the African Union Commission is to become "an efficient and value-adding institution driving the African integration and development process in close collaboration with African Union Member States, the Regional Economic Communities, and African citizens". It is envisaged that the Statistics Division of the African Union Commission will be transformed into the new African Union Institute of Statistics.

The European Union was created in the aftermath of the Second World War. The first steps were to foster economic cooperation on the basis that common economic interests between countries could promote peace and stability. Since then, the European Union has developed into a single market with many countries adopting the euro as a common currency.

The European Union actively promotes human rights and democracy and has the most ambitious emission reduction targets for fighting climate change in the world. Thanks to the abolition of border controls between many European Union countries, it is now possible for people to travel freely within the European Union.

The European Commission is one of the main institutions of the European Union, representing and upholding the interests of the European Union as a whole. It has the responsibility, and the sole right, to draft proposals for new European laws, and it manages the day-to-day business of implementing European Union policies and spending European Union funds. Eurostat is a Directorate General of the European Commission specialised in European statistics and heading the European Statistical System (ESS).

The publication

This statistical book presents a range of statistics on African and European countries.

The first chapter gives an overview of demography, key economic indicators and external trade in Africa, Europe and some selected countries or world regions.

Following this, seven thematic chapters present balanced sets of key indicators: demography, health, education, national accounts, economy and finance, industry and services and external economic relations. Two tables are available for each indicator, one presenting data for the African countries and the other one for the European countries.

The data presented in this publication cover the period up to 2015, or until the last year for which data are available.

Data sources

The statistics shown in this publication for the African countries have been provided by the Statistics Division of the African Union Commission in July 2016. These data were produced by the National Statistical Institutes or National Central Banks of the African countries or by international organisations (United Nations, OECD, IMF, World Bank and ILO). The data sets from international organisations, used to compile comparable statistics on specific themes, are confirmed by countries, so that any variations resulting, for instance, from methodological differences, are reconciled in the final tables and figures.

EU-28 data presented in this publication have been processed and calculated by Eurostat on the basis of information provided by the National Statistical Institutes of the 28 Member States of the European Union. The information was extracted from Eurostat reference database (Eurobase) in October 2016.

Countries and organisations

The 'Africa' aggregate presented in this publication includes the following countries:

Algeria, Angola, Benin, Botswana, Burkina Faso, Burundi, Cameroon, Cape Verde, Central African Republic, Chad, Comoros, Congo, Côte d'Ivoire, Democratic Republic of Congo, Djibouti, Egypt, Equatorial Guinea, Eritrea, Ethiopia, Gabon, Gambia, Ghana, Guinea, Guinea-Bissau, Kenya, Lesotho, Liberia, Libyan Arab Jamahiriya, Madagascar, Malawi, Mali, Mauritania, Mauritius, Morocco, Mozambique, Namibia, Niger, Nigeria, Rwanda, Sao Tome and Principe, Senegal, Seychelles, Sierra Leone, Somalia, South Africa, South Sudan, Sudan, Swaziland, Tanzania, Togo, Tunisia, Uganda, Zambia and Zimbabwe.

Please note that Morocco is not a member of the African Union, however its statistics are presented in this publication. Data for South Sudan are generally available from 2012 onwards, the first year of independence. However, some population data are available from 2010 onwards.

Candidate country to the entrance in the African Union is:

Morocco.

The EU-28 aggregate presented in this publication includes the following countries:

Belgium, Bulgaria, Czech Republic, Denmark, Germany, Estonia, Ireland, Greece, Spain, France, Croatia, Italy, Cyprus, Latvia, Lithuania, Luxembourg, Hungary, Malta, Netherlands, Austria, Poland, Portugal, Romania, Slovenia, Slovakia, Finland, Sweden and United Kingdom

European Free Trade Association (EFTA) countries are:

Iceland, Liechtenstein, Norway and Switzerland

Candidate countries to the entrance in the European Union are:

Montenegro, the Former Yugoslav Republic of Macedonia, Albania, Serbia and Turkey.

Special note

The Irish GDP for 2015 has been revised upwards by the Irish Central Statistics Office. This is in effect a level shift from 2015 onwards. Irish GDP is now significantly higher than it was in 2014, and future changes in GDP will be from this higher level. This upwards revision to GDP has an impact on any indicator which is presented as a ratio to GDP. In the absence of any other changes, such ratios will fall as a simple mathematical result of an increase in GDP. The revision also impacts on the GDP growth rate from 2014 to 2015. At the same time, the Balance of Payments data were also revised in a consistent way, affecting mainly goods (exports), services (imports) and direct investments (assets).

Rounding

Values and the calculations made on the basis of these values (percentages, growth rates) have been rounded, usually to the first decimal point. The sum of the individual values (or percentages) may differ slightly from the total value (or from 100%).

Valuation

All data in value are expressed in euro. Data for the African countries have been provided to Eurostat in US dollars or in national currencies; they have been converted into euro on the basis of the exchange rates published by the European Commission in InforEuro (<http://ec.europa.eu/budget/inforeuro/>)

Eurostat data code

Source codes have been inserted after each table and graphic in this publication to help readers access easily the most recent data on the Eurostat website. Within the PDF version of this publication, the data codes under each table and graphic are presented as Internet hyperlinks.

1

Overview

This publication presents a variety of comparable statistics that illustrate the developing relations between the European Union and Africa and provides important information to those interested in both continents, including political and business leadership, journalists and researchers, as well as the general public. Data about other regions/countries are also included to give a fuller picture of the relations between the European Union and Africa on the one hand, and the world as a whole on the other.

This overview chapter presents and analyses key indicators in a number of areas such as:

- Population and health
- Economic performance
- Prices and public finances
- International trade
- Services and the information society

More detailed data for all African countries and the European Union Member States, EFTA countries and European Union candidate countries can be found in the following chapters.

Population and health ⁽¹⁾

With the world's population at over 7.3 billion inhabitants in 2015, Africa with almost 1.2 billion people has the second largest continental population, well behind the nearly 4.4 billion of Asia (Table 1.1 and Figure 1.1).

However, the growth rate of Africa's population was on average 2.5% per year between 1995 and 2015. This was the highest of all continents, more than double the 1.2% growth rate for the world population and for the population in Asia. In contrast, the population of Europe barely changed over the same period; the EU-28 growth rate averaged 0.3% per year during this period while the growth rate for Europe as a whole was only 0.1%. Africa's population rose from 720 million in 1995 (slightly less than the European total of 728 million at the same time) to 1.2 billion in 2015, substantially more than the European total (738 million) and more than twice the EU-28 total (507 million). Africa's population has grown faster than the population in China (0.6%) and India (1.6%), but the total African population still remains below the population figures for these two countries in 2015 (China 1.4 billion; India 1.3 billion). On the other hand, Africa's population was larger than the combined population of North and South America and more than three times the population size of the United States. In 2015, Africa accounted for 16.1% of the world's population compared to 10.0% for Europe as a whole and 6.9% for the EU-28.

Population projections up to 2050 (Figure 1.1 and Figure 1.2) show a continuation of this trend. Africa's population is forecasted to more than double between 2015 and 2050 to reach almost 2.5 billion. The European Union population is projected to continue to grow towards 2050, but with declining growth rates especially in the final decade up to 2050. The main reason for this difference in the projected population growth in Africa and in the European Union is that the population in the African countries is substantially younger than in the European Union Member States.

Source: Eurostat (online data code: [demo_pjan](#) and [proj_13ndbims](#)) and United Nations Population Division

There is a vast difference in life expectancy at birth between Africa and the European Union (Figure 1.3). In 2015, the life expectancy in Africa was 60.6 years, compared to 80.9 years in the European Union in 2014. However, the life expectancy is slowly growing in both the European Union and in Africa. Within Africa, there are large differences between the countries. This heterogeneity should be kept in mind when analysing the data. Generally, the life expectancy in North Africa and in several smaller African island states such as Cape Verde, Mauritius and the Seychelles is close to the European level. In all of these countries, the life expectancy in 2015 was well over 70 years, ranging from 71.3 years in Egypt up to 75.0 years in Algeria and Tunisia. However, in Swaziland the life expectancy was 48.9 years in 2015. Also in a number of other Sub-Saharan countries, including Lesotho, Sierra Leone, the Central African Republic, Chad and Côte d'Ivoire, the life expectancy at birth was less than 52 years. Main reasons for this are high prevalence of AIDS, in particular in Southern Africa, the effects of civil wars and violent conflicts, as well as poverty and limited access to effective health treatment.

Africa's higher forecasted population growth is due to a higher proportion of women in childbearing age in Africa and a higher fertility rate than in the European Union, which more than compensates for the lower life expectancy.

In many African countries the health care systems are less advanced. In addition, there is a relatively high prevalence of diseases connected to insufficient access to sanitation and clean drinking water, to sufficient and safe nutrition as well as generally difficult living conditions.

The African Health Strategy for 2007 to 2015 was developed to address these challenges. It provided a strategic framework for African countries, supporting them in their efforts towards reaching the Millennium Development Goals related to health. A revised Africa Health Strategy (2) has been developed for the period 2016-2030. This revised strategy is based on an assessment of the strategy for 2007-2015, the relevant African Union health policy instruments and integrating research and innovation for health. The policy framework is anchored in key African and global health policy commitments and instruments, in particular the 'Agenda 2063: The Africa We Want'(3) and the Sustainable Development Goals (4).

Figure 1.4: Under-five mortality rate
(deaths per thousand live births)

Source: Eurostat (online data code: [demo_magec](#) and [demo_fasec](#)) and the Statistics Division of the African Union Commission

In this context, infant mortality rates are a good indicator on the impact of the efforts made by national health systems. From 2007 to 2015, the African under-five mortality rate, i.e. the probability that a new-born baby will die before reaching age five (measured among thousand live births), has decreased from 109.8 to 77.3 (Figure 1.4). In many African countries, most of these deaths happen in the first year after birth. However, the infant mortality rate in Africa also dropped

significantly between 2005 and 2015, from 75.2 to 52.8 (Figure 1.5). Nevertheless, it lay substantially above the EU-28 value of 3.7 deaths per thousand new-borns in 2014.

Despite the significant reduction in both of these mortality rates, in 2015 more than two thirds of all under-five deaths occurred in the first year after birth in 39 African countries.⁽⁵⁾

Figure 1.5: Infant mortality rate
(deaths per thousand live births)

Source: Eurostat Eurostat (online data code: [demo_minfind](#)) and the Statistics Division of the African Union Commission

⁽⁵⁾ More detailed information can be found in Table 3.1.a and Table 3.2.a in Chapter 3.

Economic performance ⁽⁶⁾

Table 1.2 shows the relative economic performance of Africa and the European Union compared to other selected countries and the world as a whole. In 2015, the gross domestic product (GDP) at current prices of the EU-28 stood at almost EUR 14.7 billion, whilst the figure for Africa was EUR 2.0 billion. In comparison, the GDP for the United States was EUR 16.1 billion, for China EUR 9.8 billion and for Japan EUR 3.7 billion. Other major economies were Brazil, India, Canada and the Russian Federation, with GDP between EUR 1.9 billion and EUR 1.2 billion, all below the total GDP of Africa.

Africa has seen its share of world GDP grow since 2005; in 2015, Africa's share reached 3.0%, compared with 2.1% ten years earlier. In 2005, the EU-28's share in world GDP stood at 30.8%. By 2010, following the worldwide economic crisis, this share had fallen to 25.9%. Even though the European Union's GDP at current prices had regained and surpassed the level prior to the economic crisis, the European Union's share of world GDP was down to 22.3% in 2015. There was no consistent picture for other major economies. While the USA, Japan and Canada recorded a decline in their share of world GDP over the last decade, China's share tripled over the period.

The increase in Africa's share of world GDP from 2005 to 2015 was due to strong GDP growth rates in most African countries. However, the effects of civil uprisings can be clearly seen in the GDP growth figures for a number of countries, for example the sharp fall in GDP in Libya during the civil uprising in 2011. The GDP growth rates of the top ten African countries

from 2014 to 2015 outstripped the growth rates of the top ten EU-28 countries, with the exception of Ireland (Figure 1.6). However, the exceptional GDP growth for Ireland from 2014 to 2015, 26.3%, was to a large extent caused by an upwards revision of the GDP of Ireland for 2015. Before this revision, the Irish real GDP growth from 2014 to 2015 was reported as 7.8%; more information on this issue can be found on Eurostat's website ⁽⁷⁾ and the website of the Irish Central Statistics Office ⁽⁸⁾. In Africa, Ethiopia topped the list in 2015 with a GDP growth of 9.6%, followed by Liberia (9.3%) and Côte d'Ivoire (8.8%). Altogether 11 African countries recorded higher GDP growth rates in 2015 than the second best performing European Union Member State, Malta with 6.2%.

A different perspective emerges when comparing GDP per capita. In the USA and Canada, the GDP in euro per inhabitant was well above the level of the European Union as a whole in 2015, with 50 200 EUR for the USA and 38 900 EUR for Canada (Table 1.2). The EU-28 level of EUR 28 800 per capita was also just surpassed by Japan, with a GDP per capita of 29 200 EUR in 2015. However, the GDP per capita for these three countries and the EU-28 lay far above the values of the BRIC countries Brazil, India, Russia and China. The EU-28 GDP per capita rose by 5 400 EUR (23%) between 2005 and 2015. Although the figure for Africa as a whole was just 1 700 EUR in 2015, it represented an 89% rise since 2005. Amongst the other countries, it is notable that the Indian GDP per capita of 1 400 EUR was far below that of Africa in 2015. The Russian Federation recorded a GDP per capita of 8 100 EUR and Brazil a value of 7 700 EUR in 2015. China's GDP per capita was 7 100 EUR in 2015, more than four times the value recorded in 2005.

Table 1.2: Gross Domestic Product at current prices

	Gross Domestic Product (million EUR)			Share of world GDP (%)			GDP per capita (EUR)

Figure 1.8: Inflation rate (% annual growth)

Source: Eurostat (online data code: prc_hicp_aind) and the Statistics Division of the African Union Commission

At country level, GDP per capita in most African countries is still rather low (Figure 1.7). Fuelled by a large oil industry, Equatorial Guinea led the African Top 10 in 2015; its GDP of 16 500 EUR was higher than in 11 European Union Member States and corresponds to about 57% of the EU-28 value. However, only four African countries, Equatorial Guinea, Seychelles, Mauritius and Gabon, recorded a higher GDP per capita than Bulgaria, the European Union Member State with the lowest GDP per capita in 2015 (6 100 EUR).

Prices and public finances ⁽⁹⁾

Figure 1.8 shows the evolution in consumer prices in the EU-28 and Africa since 2000. Price movements in Africa have been substantially larger than in the EU-28 throughout the period considered. In Africa, inflation, i.e. the year-on-year change in consumer prices, peaked at 10.7% in 2008, following a sharp increase in 2006 and 2007. Over the last three years, 2013-2015, inflation in Africa has stabilised at between 7.0% and 7.4%. On average, African inflation ran at a rate of 8.1% per year between 2006 and 2015. Inflation peaked in 2008 also in the EU-28, at 3.7%. However, in connection with the worldwide economic crisis, inflation in the EU-28 fell sharply to 1.0% in 2009. Inflation grew again during the recovery in 2010 and 2011, but fell steadily during the following years to reach 0.0% in 2015.

Africa's government revenue and expenditure as percentage of GDP were lower than the EU-28 level throughout the period considered (Figure 1.9). African values have generally been between 25% and 30% of GDP for both revenue and expenditure. However, both government revenue and expenditure have fallen since 2012, with revenue at 18.9% of GDP and expenditure at 27.4% of GDP in 2015. In comparison, the corresponding values for the EU-28 were relatively stable between 43% and 51% of GDP over the period 2008-2015, with revenues between 43.6% and 45.4% of GDP and expenditure between 46.5% and 50.3% of GDP. With the exception of Africa in 2008, government expenditure exceeded revenues for both country groups over the period considered.

Africa's government revenue and expenditure as percentage of GDP were lower than the EU-28 level throughout the period considered (Figure 1.9). African values have generally been between 25% and 30% of GDP for both revenue and expenditure. However, both government revenue and expenditure have fallen since 2012, with revenue at 18.9% of GDP and expenditure at 27.4% of GDP in 2015. In comparison, the corresponding values for the EU-28 were relatively stable between 43% and 51% of GDP over the period 2008-2015, with revenues between 43.6% and 45.4% of GDP and expenditure between 46.5% and 50.3% of GDP. With the exception of Africa in 2008, government expenditure exceeded revenues for both country groups over the period considered. The difference between expenditure and revenues, i.e. the fiscal balance, was negative for the EU-28 over the whole period 2008-2015. However, after a fiscal deficit during the economic crisis of -6.7% and -6.4% in 2008 and 2009 respectively, the fiscal deficit in the EU-28 has been steadily cut and stood at -2.4% of GDP in 2015. In contrast, the difference between government expenditures and revenues has gradually grown in Africa, resulting in the deficit in the fiscal balance increasing to -5.8% in 2015 from the stable level of between -3.1% and -3.5% over the period 2009-2013.

In 2015, government revenue as share of GDP was lower than five years before for two thirds of the African countries. At the same time, government expenditure as share of GDP fell for 62% of the countries ⁽¹⁰⁾. Almost all of the countries that recorded decreases in government revenues as share of GDP also recorded decreases in expenditures. In total, the fiscal balance weakened for 60% of the African countries from 2010 to 2015. However, the level of government revenue and expenditure compared to GDP varies strongly across Africa.

⁽⁹⁾ More detailed price statistics and detailed information on public finances for the EU and Africa can be found in chapter 6.

⁽¹⁰⁾ More detailed information can be found in Table 6.2.a in Chapter 6.

International trade ⁽¹⁾

Africa accounted for around 8% of imports to the EU-28 and 9% of exports from the EU-28 in 2015, measured by value (Figure 1.10). This was far behind Asia, which stood for 45% of imports to the EU-28 and 36% of exports. As comparison, Northern America accounted for 16% of EU-28 imports but was the destination for 23% of EU-28 exports.

The EU-28 trade balance with Africa for goods was negative in all years between 2003 and 2014, but turned to a surplus in 2015 (Figure 1.11). The European Union's trade deficit with Africa fell sharply from 41.2 billion EUR in 2008 to 3.8 billion EUR in 2009, clearly reflecting the worldwide economic crisis, with both import and export values dropping.

This fall in both exports and imports broke the steady increase in trade between EU-28 and Africa between 2003 and 2008, which had seen EU-28 exports to Africa raise by 71% and imports by 94% over this period. From 2009 to 2012, EU-28 exports to Africa returned to growth, before stabilising at around 153 billion EUR from 2013 to 2015. Also the imports from Africa resumed its strong growth in 2009, exceeding the pre-crisis value by 16% in 2012. However, from 2013 onwards the value of EU-28 imports from Africa has fallen each year. By 2015, the imports from Africa, at 132.0 billion EUR, had fallen by 29% compared to the peak of 186.7 billion EUR in 2012. By far the main cause for this was the fall in value of crude oil and natural gas imports from Africa, due in large part to falling world market prices for these products.

⁽¹⁾More detailed balance of payments information, international trade in goods and official development assistance, can be found in chapter 8.

In 2015, the three main African partners for imports of goods to the EU-28 were Algeria (16% of total import value from Africa), South Africa (15%) and Nigeria (14%) (Figure 1.12). Together, these three countries accounted for 45% of EU-28 imports from Africa. For both Algeria and Nigeria, the main product group imported to the EU-28 was petroleum products, more specifically crude oil and natural gas. Due to the fall in petroleum prices, the value of this trade has fallen and both have seen their share in EU-28 imports from Africa falling in recent years. Libya has seen an even stronger fall in its share of EU-28 imports, due partly to the fall in petroleum prices and partly to the continued instability following the Civil War of 2011. In 2013, Libya ranked third among African importers to EU-28 with 14% of the import value. By 2015, Libya was ranked seventh with only 6% of the import value from Africa. The main African destination for EU-28 exports in

2015 was South Africa, taking 17% of these exports. Thereafter followed Algeria (14%), Egypt (13%) and Morocco (12%) (Figure 1.13).

Considering the products traded, the EU-28's major imports from Africa were above all energy products (Table 1.3). For these products (in particular crude oil), Africa is second only to Russia as an EU-28 import source. In 2015, despite falling by half since 2012, the value of energy product imports from Africa still amounted to EUR 61.6 billion. This made up 46.6% of EU-28 imports from Africa that year. Other important groups of goods imported from Africa were food and live animals (12.3% of total EU-28 imports from Africa), machinery and vehicles (10.9%) as well as manufactured products classified by material (9.4%).

In 2015, EU-28 exports to Africa mainly consisted of processed products. The main product group was machinery and vehicles, in particular road vehicles; with 57.4 billion EUR, this product group accounted for 37.3% of EU-28 export value to Africa (Table 1.4). Other important product groups were manufactured products classified by material (22.2 billion EUR) and chemicals (20.8 billion EUR), accounting for 14.4% and 13.5% of the value of EU-28 exports to Africa in 2015 respectively (Figure 1.14). For EU-28 exports of energy products to Africa, there was a significant reverse flow of refined oil products, amounting to some 17.9 billion EUR (11.6%) in 2015.

From 2014 to 2015, the value of exports to Africa of machinery and vehicles, the largest product group by far, grew by 4%. Amongst the other main product groups, the export value from EU-28 to Africa fell by 1% for manufactured products classified by material, rose by 8% for chemicals, but fell by almost 15% for energy products.

On the import side, the value of imports of energy products from Africa fell by a third from 2014 to 2015, following drops of 15% in 2014 and 12% in 2013. This downturn was partly due to the falling world market prices for petroleum products and partly due to falls in the quantities imported from a number of important countries from 2014 to 2015. Notable amongst these was a strong fall in the volumes of energy products imported from Libya (-19%), South Africa (-18%), Equatorial Guinea (-14%) and Algeria (-5%). In addition to energy

products, there were also slight declines in the values of crude materials and chemicals imported from Africa to EU-28 (both -3%), as well as for manufactured products classified by material (-1%). For all other main groups of commodities, the value of imports increased from 2014 to 2015.

Services and the information society ⁽¹²⁾

Tourism contributes considerably to the economy of many African countries. In 2015, the sum of arrivals of non-resident tourists at the border of African countries amounted to 63.5 million, down slightly from the previous year (-3%). Several African countries recorded high tourist numbers in 2015. Figure 1.15 presents the Top 10 countries in Africa and the European Union respectively, in terms of the non-resident tourist arrivals. However, the European Union figures record arrivals at tourist accommodation establishments. Thus, on the one hand, the European Union figures do not record tourists arriving in non-rented accommodation (e.g. owned second homes, visits to relatives and friends with accommodation free of charge). On the other hand, tourists travelling inside the country and staying in more than one tourist accommodation establishment during their trip are counted as a new arrival each time they register to an accommodation establishment. The figures for European Union Member States can therefore not be directly compared to the figures for African countries, which record tourist arrivals at the border.

⁽¹²⁾ More detailed information on tourism, mobile phones, electricity production and production indices can be found in chapter 7.

Figure 1.14: EU-28 trade in goods with Africa, by product group (SITC section), 2015
(billion EUR)

Source: Eurostat (online data code: DS-018995)

Together, Morocco, Egypt, South Africa and Tunisia accounted for more than half of all non-resident tourist arrivals in Africa in 2015. Most of the North African countries registered a strong increase in the number of tourist arrivals up to the year 2010. However, following the civil uprisings during the Arab spring and the uncertain security situation thereafter, the numbers of non-resident tourists arriving have fallen to much lower levels in several countries. The number of arrivals in Egypt peaked at 14.7 million in 2010, making Egypt the main tourist destination in Africa that year, but fell by a third in 2011. In 2015 Egypt recorded 9.3 million non-resident tourist arrivals, which was still the second-highest amongst the African countries.

An exception in North Africa is Morocco, where the security situation has been stable during the period. The number of non-resident tourists in Morocco has been growing steadily since 2006, with only a slight slow-down in 2012. In 2015, the number of tourist arrivals was 10.2 million, making Morocco the top tourist destination in Africa. However, both Morocco and Egypt experienced a slight decline in the number of tourist arrivals from 2014 to 2015, both by -2%. South Africa followed in third place with 8.9 million tourist arrivals in 2015, with Tunisia in fourth place, albeit by some distance, with 5.4 million arrivals. For both South Africa and Tunisia, this represented a decline of close to 12% compared to the tourist arrivals in 2014.

(!) 2012 data
Source: Eurostat (online data code: tour_occ_arn2)

Telecommunications are crucial for developing an information society and for providing access to new services and information. Therefore, telecommunications play an important role in national development and the global economy. As fixed network infrastructures are expensive and take a long time to build, especially in remote and thinly populated areas, mobile networks have taken a prominent role in the development of the telecommunications sector and the information society in Africa. As a result, mobile communication penetration has risen rapidly in. In 2014, the number of mobile communication subscriptions per thousand inhabitants reached 781, which were eight and a half times higher than a decade before (Figure 1.16).

In terms of mobile communication subscriptions per inhabitant, the Top 20 list for Africa and the European Union includes Gabon, Botswana, Seychelles, Libya, South Africa and Mali. These African countries had mobile communication penetration rates that matched the highest rates in the

European Union Member States in 2014, all lying above the EU-28 average of 1 355 mobile communication subscriptions per thousand inhabitants.

In contrast, in particular Eritrea lagged far behind with only 64 subscriptions per thousand inhabitants in 2014. South Sudan and the Central African Republic also have low mobile communications penetration, both recording 245 subscriptions in 2014. Burundi, Ethiopia, Djibouti and Malawi also recorded rates of less than half of the African average of 781 subscriptions. Nevertheless, most countries with a low mobile communication penetration registered high growth rates. Over the decade from 2004 to 2014, the highest growth rate was recorded in Ethiopia, where a penetration of two subscriptions per thousand inhabitants in 2004 had increased to 316 in 2014. Other countries that recorded exceptional growth in mobile communications penetration over the last decade include Mali, Rwanda, Guinea and the Comoros, all from very low starting levels.

Definitions

Population on 1 January: the inhabitants of a given area on 1 January of the year in question (or, in some cases, on 31 December of the previous year). The population is based on data from the most recent census adjusted by the components of population change produced since the last census, or based on population registers.

Mid-year population relates to de facto population - i.e. all persons who are present in a given area - on a date close to 1st July. It includes, for instance, all foreigners on holiday in that area on the reference date and excludes residents on holiday in another area.

Life expectancy at birth is the average number of years a newborn infant would live if prevailing patterns of mortality of the total population at the time of his/her birth were to remain the same throughout his/her life.

Economically active population: the economically active population comprises all employed and unemployed persons (including those seeking jobs for the first time). It covers employers, persons working on their own account, salaried employees, wage earners, unpaid family workers, cooperative workers, and members of the armed forces.

Definitions

The **under-five mortality rate** is the probability that a new-born baby will die before reaching the age of five, if subject to current age-specific mortality rates. It is expressed as number of deaths per 1000 live births.

The **infant mortality rate** is the probability that a new-born baby will die before reaching the age of one, if subject to current age-specific mortality rates. It is expressed as number of deaths per 1000 live births.

A live birth is the complete expulsion or extraction of a baby from its mother, which breathes or shows any other evidence of life, such as beating of the heart, pulsation of the umbilical cord, or definite movement of voluntary muscles, whether or not the umbilical cord has been cut or the placenta is attached.

Vital registration systems are the preferred source of data on under-five mortality because data are prospective and cover the entire population. However, in countries lacking a fully functioning vital registration system, household surveys, such as DHS and MICS, have become the primary source of data on child mortality, even though there are some limits to their quality.

Data on under-five mortality are more complete and timely than data on adult mortality. Under-five mortality rates are also considered to be more robust than infant mortality rates when estimates are based on information drawn from household surveys.

Vital statistics are statistics on live births, deaths, fetal deaths, marriages and divorces. The most common way of collecting information on these events is through civil registration, an administrative system used by governments to record vital events which occur in their populations. Efforts to improve the quality of vital statistics are therefore closely related to the development of civil registration systems. The majority of African countries do not yet have fully developed civil registration and vital statistics systems, and hence encounter problems producing current and continuous fertility and mortality statistics.

Births registered measures the number of births registered by the civil registration systems of the country in the reference year, expressed per 1000 population.

Deaths registered measures the number of deaths registered by the civil registration systems of the country in the reference year, expressed per 1000 population.

Health expenditure is provided according to the classification of the functions of government (COFOG). This indicator is expressed as a proportion of total general government expenditure (for European countries, it has been calculated as the proportion of general government health expenditure in total general government expenditure).

Definitions

Data on education relate to public and private schools. The reference years correspond to the beginning of the school/academic year.

[The International Standard Classification of Education \(ISCED\)](#) is the basis for international education statistics, describing different levels of education among other characteristics. ISCED level 1 is primary education, which begins between 5 and 7 years of age and is compulsory in all countries. ISCED level 2 is lower secondary education, which continues the basic programmes of the primary level, although teaching is more subject-focused.

[Primary level of education \(ISCED level 1\)](#)

Programmes are normally designed to give students a sound basic education in reading, writing and mathematics along with an elementary understanding of other subjects such as history, geography, natural science, social science, art and music. In some cases religious instruction is featured.

[Teaching staff at a specific level](#)

Teachers are defined as persons whose professional activity involves the transmission of knowledge, attitudes and skills, as laid out in a formal curriculum programme, to students enrolled in a formal educational institution at a specific level (primary, secondary or tertiary).

[Students/pupils](#) are defined as any individual participating in educational services. The number of students/pupils enrolled refers to the count of students/pupils studying in the reference period, i.e. the school/academic year.

[First-level student enrolment](#) is the number of pupils enrolled at the primary level of education, regardless of age.

[Public expenditure on education](#) is dedicated to financing current and capital expenditure of educational institutions, supporting students and their families with scholarships and public loans, and transferring public subsidies for educational activities to private firms or non-profit organisations (transfers to private households and firms). This indicator is expressed as a proportion of total general government expenditure (for European countries, it has been calculated as the proportion of general government education expenditure in total general government expenditure).

Definitions

National accounts data for the African countries are obtained from various national sources and supplemented with data from international sources such as the UN Yearbook of National Accounts and the AfDB (African Development Bank) and estimates by the African Centre for Statistics of UNECA (United Nations Economic Commission for Africa). Where necessary, official figures have been adjusted to conform to the **System of National Accounts (SNA)**. Although compiling their national accounts in accordance with the 1993 SNA, most African countries currently work on implementing the 2008 SNA, and almost two thirds of the countries plan to conclude this work by 2018.

For European countries, annual national accounts are compiled in accordance with the **European System of Accounts (ESA 2010)**. The ESA 2010 is broadly consistent with the System of National Accounts of the United Nations (2008 SNA) as regards the definitions, accounting rules and classifications.

Gross Domestic Product (GDP) measures the total final market value of all goods and services produced within a country during a given period. GDP is the most frequently used indicator of economic activity and is most often measured on an annual or quarterly basis to gauge the growth of a country's economy between one period and another. GDP is also a measure of total consumer, investment and government spending plus the value of exports minus imports. GDP is the most widely used indicator from the System of National Accounts (SNA). Its methodology is standardised internationally thus enabling comparison between countries anywhere in the world.

GDP growth rate is calculated as increase in GDP relative to the previous year, in percentage. GDP is measured at constant prices in national currency, in order to calculate a growth measure that is not influenced by price inflation and by variations in the exchange rates.

GDP per capita is an indicator that is derived through division of GDP by total population.

Definitions

General government sector is defined in ESA 2010 as including “all government units and all non-market non-profit institutions (NPIs) that are controlled by government units.” It also comprises other non-market producers under public control.

Government revenue comprises the following categories of the general government accounts: market output; output for own final use; payments for non-market output; receivable taxes on production and imports; other receivable subsidies on production; receivable property income; current taxes on income, wealth, etc.; net social contributions; other current transfers; receivable capital transfers.

Government expenditure corresponds to the following categories of the general government accounts: intermediate consumption; gross capital formation; compensation of employees; other payable taxes on production; payable subsidies; payable property income; current taxes on income, wealth, etc.; social benefits other than social transfers in kind; social transfers in kind - purchased market production; other current transfers; adjustment for the change in pension entitlements; payable capital transfers; acquisitions less disposals of non-produced assets.

Government fiscal balance corresponds to government overall surplus/deficit. By definition, the difference between general government revenue and general government expenditure is net lending (+)/net borrowing (-) of the general government sector.

For African countries, the **external debt** (total outstanding debt) is the amount, at any given time, of disbursed and outstanding contractual liabilities of residents of a country to non-residents to repay principal, with or without interest, or to pay interest with or without principal. It is the sum of public and publicly-guaranteed short and long-term debt, private non-guaranteed short and long-term debt and the use of IMF credit. To date, 30 African countries have received debt relief through the joint IMF - World Bank Heavily Indebited Poor Countries (HiPC) Initiative and the Multilateral Debt Relief Initiative (MDRI).

For European countries, the **government debt** is defined as the total consolidated gross debt at nominal value at the end of the year in the following categories of government liabilities: currency and deposits, securities other than shares (excluding financial derivatives), and loans.

Annual inflation measures the change from one year to the next in the prices of consumer goods and services acquired, used or paid for by households. They show the cost of acquisition of a basket of goods and services purchased by the average consumer. Weights for the computation of the index numbers are obtained from household budget surveys.

Harmonised Indices of Consumer Prices (HICP) are a set of European Union consumer price indices (CPIs) calculated according to a harmonised approach and a single set of definitions. They are designed for international comparison of consumer price inflation. The annual inflation rates presented for the European countries are based on the HICP price measurements. HICPs are not strictly comparable with national CPIs.

Definitions

Industrial production index provides a measure of the volume trend in value added at factor cost over a given reference period. In practice, however, value added is not available on a monthly basis in most countries. Therefore, data is generally collected for variables other than value added, with possible alternatives including gross production values, volumes, turnover, work input, raw material input, energy input. The production index is a volume index, which covers NACE sections B (**mining and quarrying**), C (**manufacturing**) and D (electricity, gas, steam and air conditioning supply). For European countries, data are adjusted by working days.

Electricity production is the process of creating electricity from other forms of energy. Electrical energy covers electricity generated in all types of power plants (e.g. in nuclear, thermal, hydro, wind, photovoltaic or other plants) to be distributed to consumers through the grid or consumed locally. The gross electricity generation at plant level is defined as electricity measured at the outlet of the main transformers, i.e. the consumption of electricity in plant auxiliaries and in transformers is included. The production of electricity includes, on the one hand, public utilities whose primary purpose is to generate and transmit electric energy to the public, and on the other, private self-production units that produce electric energy intended, in whole or in part, for their own use. It is measured in terms of kilowatt hour (KWh).

Hydro-electricity refers to potential and kinetic energy of water converted into electricity in hydroelectric plants.

Solid fuel refers to various types of solid material that are used as fuel in power stations to produce energy and provide heating, usually released through combustion.

For African countries, **arrivals of non-resident tourists** refers to all persons checked at the frontier travelling for pleasure, health, business, meetings or studies and stopping in that country for twenty-four hours or more. The figures exclude immigrants and residents in a frontier zone.

For European countries, **arrivals of non-residents tourists** refer to arrivals of visitors who are not residents of the country, taking a trip of less than a year and staying in tourist accommodation establishments. The trips may be for any main purpose (except to be employed by a resident entity in the place visited). An arrival is defined as a person (tourist) who arrives at a tourist accommodation establishment and checks in. Tourists arriving in non-rented accommodation are not recorded. Tourists travelling inside the country and staying in more than one tourist accommodation establishment during their trip are counted as a new arrival each time they register to an accommodation establishment.

Tourist accommodation establishments include hotels and similar accommodation, holiday accommodation and other short-stay accommodation, as well as camping grounds, recreational vehicle parks and trailer parks.

Number of mobile communication subscriptions per thousand inhabitants for European Union Member States (except Croatia) from 2009 onwards give the number of active SIM cards divided per thousand inhabitants. It includes both voice and data services, installed in telephones, modem, usb keys or other devices.

Number of mobile communication subscriptions per thousand inhabitants for European Union Member States until 2009 and for non-EU countries and Croatia give the number of subscribers per thousand inhabitants to services of operators offering mobile communications connected to an automatic public mobile communication service using cellular technology. It also includes pre-paid cards. One person may have more than one subscription.

Note: Negative values for FDI denote disinvestment.

(1) From 2013, the investment flows are defined in accordance with the IMF's Balance of Payments and International Investment Position Manual, sixth edition (BPM6); up to and including 2012 and for the candidate countries, the fifth edition is used (BPM5).

(2) Up to and including 2012: differing definition (see metadata associated with dataset *bop_fdi_main*)Source: Eurostat (online data code: *bop_fdi_main*, *bop_fdi6_flow*, *cpc_ecbop*, *demo_pjan* and *cpc_psdemo*)

Definitions

Balance of payments statistics are based on the International Monetary Fund's (IMF) Balance of payments and international investment position manual - sixth edition (BPM6). The balance of payments is a statement that summarises economic transactions between residents and non-residents. The balance of payments consists of the current account, the capital account and the financial account.

The **current account** shows flows of goods, services, primary income, and secondary income between residents and non-residents. It is an important grouping of accounts within the balance of payments. The main components of the current account are:

- Trade in goods;
- Trade in services;
- Primary income account, which shows amounts payable and receivable in return for providing temporary use to another entity of labour, financial resources, or non-produced non-financial assets;
- Secondary income account, which shows redistribution of income, i.e. when resources for current purposes are provided by one party without anything of economic value being supplied as a direct return to that party. Examples include personal transfers and current international assistance.

Current account balance is the balance on these accounts. The current account balance shows the difference between the sum of exports and income receivable and the sum of imports and income payable (exports and imports refer to both goods and services, while income refers to both primary and secondary income). The value of the current account balance equals the saving-investment gap for the economy.

Services balance (current accounts) is defined as credits (exports) minus debits (imports) of services. Services include: manufacturing services on physical inputs owned by others; maintenance and repair services; transport (of freight and passengers); travel; construction; insurance and pension services; financial services; charges for the use of intellectual property; telecommunications, computer, and information services; other business services (which includes miscellaneous business, professional and technical services); personal, cultural, and recreational services; government goods and services.

Trade balance (current accounts) is equal to credits (exports) less debits (imports) of goods. Both exports and imports are measured on the "free-on-board" (f.o.b.) basis – that is, by the value of the goods at the border of the exporting country. Cost-insurance-freight (c.i.f.) is not included. Goods cover general merchandise as well as other goods (including merchanting and non-monetary gold).

In international trade statistics, **exports** cover transactions in goods (sales, barter, gifts or grants) from residents to non-residents; **imports** cover transactions in goods (purchases, barter, gifts or grants) from non-residents to residents.

Foreign direct investment (FDI) is international investment when an investor resident in one economy makes an investment that gives control or a significant degree of influence on the management of an enterprise resident in another economy. Control exists if the direct investor (directly or indirectly) owns more than 50 percent of the voting power in the direct investment enterprise; a significant degree of influence exists if the direct investor owns from 10 to 50 percent of the voting power. In addition, there are also direct investment relationships that are under the control or influence of the same investor.

Inward flows of FDI (FDI flows into the reporting economy; FDI inflows) are direct investment transactions by foreigners in enterprises resident in the reporting economy. These statistics are based on the OECD's Benchmark Definition of Foreign Direct Investment, third edition (developed in line with the IMF's Balance of Payments Manual).

Official Development Assistance (ODA) relates to grants or concessional loans (i.e. with a grant element of at least 25 percent), undertaken by the official sector, whose main objective is the promotion of economic development and welfare. It is defined as net disbursements for Official Development Assistance (ODA) at market prices to the countries of the Development Assistance Committee (DAC) list of recipients. Such international cooperation falls under the secondary income account of the current account.

HOW TO OBTAIN EU PUBLICATIONS

Free publications:

- **one copy:**
via EU Bookshop (<http://bookshop.europa.eu>);
- **more than one copy or posters/maps:**
from the European Union's representations (http://ec.europa.eu/represent_en.htm);
from the delegations in non-EU countries (http://eeas.europa.eu/delegations/index_en.htm);
by contacting the Europe Direct service (http://europa.eu/europedirect/index_en.htm) or calling 00 800 6 7 8 9 10 11 (freephone number from anywhere in the EU) (*).

(*). The information given is free, as are most calls (though some operators, phone boxes or hotels may charge you).

Priced publications:

- via EU Bookshop (<http://bookshop.europa.eu>).

HOW TO OBTAIN AU PUBLICATIONS

All publications:

- at the African Union Head Quarter: you can find the contact details on the Internet (<http://www.au.int>).

The European Union and the African Union

A STATISTICAL PORTRAIT

This “statistical portrait” 2016 edition presents a broad comparison between the situation of the European Union, including EFTA members and Candidate countries, and the African Union, its member states and non-member states. The publication is jointly produced by Eurostat and the Statistics Division of the African Union Commission (AUSTAT) on the basis of data from both organisations.

With data up to and including the year 2015, this “portrait” includes various domains such as demography, health, education, national accounts, trade, and more. Tables in the eight chapters help the user to gain a detailed view on different aspects, such as mobile communication subscriptions, number of teachers, life expectancy, GDP, tourism, etc.

An overview chapter is also included, presenting statistical comparisons with the rest of the world.
