JOINT PRESS RELEASE

EMBARGOED UNTIL 12:00 PM EAT MONDAY, JANUARY 30, 2017

Uganda wins high-level award for significant progress against malaria

ADDIS ABABA, ETHIOPIA (30 January 2017) – At a time of historic progress toward a malaria-free Africa, the African Leaders Malaria Alliance (ALMA) honoured eight African countries that have shown commitment and innovation in the fight against the disease.

Today at the 28th African Union Summit, the 2017 ALMA Awards for Excellence were awarded to:

- Botswana, Cabo Verde, Comoros, Democratic Republic of Congo (DRC), Ethiopia, Swaziland and Uganda, for their impact on malaria incidence and mortality; and
- Chad, for its leadership in the fight against malaria.

“Thanks to strong African leadership and innovative new partnerships, we are making unprecedented progress in the fight against malaria,” said H.E Idriss Déby Itno, President of Chad and current Chairperson of the African Union. “The success of these countries shows the powerful impact that dedication and sufficient funding can have.”

Uganda achieved a more than 40 percent decrease in malaria incidence and malaria mortality from 2010 to 2015, according to the World Health Organization. This success was the result of a significant scaling up of insecticide-treated nets and indoor residual spraying as well as case management, including through public health facilities, the private sector and integrated community level activities. Uganda has secured a US$188 million commitment from the Global Fund for 2018 to 2020 for malaria, enabling the country to build upon its progress.

“Uganda’s commitment to fighting malaria is paying off,” said Joy Phumaphi, Executive Secretary of ALMA. “The reduction in cases and deaths proves that persistence and leadership make a difference in the malaria fight.”

The 2017 ALMA Awards for Excellence come just six months after the adoption of the ‘Catalytic Framework’ at the 27th African Union Summit last July. The framework provides a roadmap for African countries to increase domestic resources, expand the use of innovation and technology, and improve health infrastructure to eliminate malaria from the continent by 2030.
“Congratulations to Uganda,” said Dr. Mustapha Sidiki Kaloko, Commissioner for Social Affairs at the African Union Commission. Further, he said, “I welcome ALMA’s continued partnership in the fight to end malaria. In this regard, the Catalytic Framework is providing strategic direction to guide countries to achieve malaria control and elimination.”

Since 2000, malaria mortality rates across the continent have fallen by 62 percent in all age groups and by 69 percent among children under five. The increase in those sleeping under long-lasting insecticidal nets, or protected by indoor residual spraying, as well as diagnostic testing of children and treatment of pregnant women has contributed to significantly lowering incidence and mortality in Africa. These achievements come at a time when African countries are providing more domestic funding to fight malaria.

The growing role of African leaders is also reflected in the recent formation of the End Malaria Council, a group of committed business and public sector leaders that has come together to ensure malaria eradication remains a global priority. Five of the nine leaders on the council are African: H.E. Idriss Déby Itno, President of Chad; H.E. Ellen Johnson Sirleaf, President of Liberia and former ALMA Chair; H.E. Jakaya Kikwete, former President of Tanzania and founding ALMA chair; Graça Machel, Founder of Foundation for Community Development; and Aliko Dangote, President and Chief Executive of the Dangote Group. The council will explore innovative approaches to mobilize political will and resources and develop new tools to help end malaria.

ALMA will also be working closely with the new Roll Back Malaria Chief Executive Officer Dr. Kesetebirhan Admasu, former Minister of Health of Ethiopia.

Malaria remains a critical threat in Africa – the region still bears the highest global malaria burden. In 2015, 195 million of the 212 million new malaria cases and 394,000 of the world’s 429,000 malaria-related deaths were in Africa.

About ALMA

Founded in 2009, ALMA is a ground-breaking coalition of African Heads of State and Government working across country and regional borders to achieve a malaria-free Africa by 2030. All African Union member countries are members of ALMA. The ALMA Scorecard for Accountability & Action is an important tool, which tracks progress and drives action.

The ALMA Awards for Excellence celebrate exemplary leadership in malaria control and elimination efforts. The Awards are chosen by an independent selection committee comprised of leaders and experts in the areas of health, academia and the private sector.
